PROJECTS

DevMountain

Lehi, UT

Project: Employee Manager

- Test the functionality of an application used to add, edit, delete, and manage employees
- Performed a combination of manual test case executions and exploratory testing.
- Documented user requirements, expected functionality and organized test cases.
- Verified that features and bug fixes were working and meeting development requirements.
- Converted manual test cases into automation test suites using Selenium and Nightwatch.js

Aug 2019

Project: Haven

- Worked on a collaborative project with iOS/UX Designers and QA Engineers to create an iOS app for homeowners to help manage household related maintenance and expenses

SUMMARY:

I am a QA Software Testing Professional with experience in designing and implementing both manual and automated tests for software applications across various platforms. I also have experience as a Graphic Designer and Technical Support Assistant, specializing in Network Maintenance and Security. My current objective is to secure a position as a Quality Assurance Engineer at a cutting-edge, technology-driven organization with an environment that promotes growth while also encouraging innovative thinking, career development and employee recognition.
